

# GT2™

## Parabone Milking System

The GT2 Parabone combines the best of herringbone and parallel stalls in an economical parlor solution. Compact 30-inch stall spacing and parallel-stall-style udder access provides efficient milking from the side or between the rear legs.

### *The GT2™ Features*

- **Cow-friendly contour rump panel** - Available in stainless or galvanized steel
- **Adjustable brisket rail placement** - Telescoping brisket rail support arms and rump rail support arches enable "custom fit" installation
- **Bolt together construction** - Provides quick, economical installation and eliminates potential rusting around welds
- **Configurable to meet your needs and your budget** - Available with stationary or indexing brisket rails and manual or air operated entrance and exit gates
- **Rear milking parlor in herringbone-style configuration**
- **Available in sizes 2x3 to 2x36**
- **Optimum cow positioning**

## GT2™ Stall System

- **Rear milking** in a robust 2 inch herringbone-style stall system
- **Open space** without divider gates for rapid cow movement
- **Air option for entrance and exit gates** can be automated for operator efficiency
- **Designed for cows**, while providing efficient protection for milking crew and equipment

## Additional Features and Options

- **Brisket rail with dividers** - Provides ideal cow positioning
- **Indexable brisket rail** - Swings out of the way for fast, easy cow exiting
- **Brisket rail with feed trough** - For optional in-parlor feeding
- **Angled, custom-fit rump panels** - Protect milking crew and equipment
- **Optional DualFlo™ Swing Over System** - Ideal for DualFlo Swing Over installations up to 2x36
